

Good Morning everyone.

My name is Dhakshatha, and I am from Palladam. I am currently pursuing my final year B.TECH in Artificial Intelligence and Data Science at Sri Shakthi Institute of Engineering and Technology. With the current Cgpa of 8.4 .I completed my schooling at Infant Jesus Matric Higher Secondary School and I have scored 80 percentage in my 12th Grade.

Coming to my domain, my main area of interest is Data Analytics and Cloud Computing because today organizations depend on data and cloud technologies for better decision-making and efficient services. I am interested in understanding how data can be analyzed to find useful insights and how cloud platforms help in storing, managing, and accessing data securely and efficiently. I also enjoy learning how businesses use analytics and cloud solutions to improve performance and solve real-world problems.

To build my knowledge in Data Analytics and Cloud Computing, I started learning Python, SQL, Excel, Power BI, and cloud fundamentals. I am particularly interested in understanding how data can be processed, analyzed, and visualized to support better decision-making. I also enjoy improving my problem-solving skills through practical learning and hands-on projects. To improve my practical exposure, I have participated in workshops and online learning activities related to data analytics and cloud technologies.

Coming to my projects, my first project is "Automated ETL for E-Commerce Analytics." In this project, I am developing an automated ETL pipeline to extract, transform, and load e-commerce data for analytics and reporting purposes. I am using Python and SQL to clean, process, and structure the data, which helps reduce manual effort and improve data accuracy.

My another project is "AI Image Detection System." In this project, I am working on an AI-based system that detects and analyzes images using machine learning concepts. The main objective of this project is to identify and classify images accurately using AI techniques. Through this project, I am gaining practical exposure to image processing and artificial intelligence concepts.

These projects are helping me improve my practical knowledge, strengthen my skills in Python, SQL, and AI concepts, and increase my interest in the data engineering and analytics domain.

Apart from academics, I enjoy drawing, cooking and solving puzzles.

My key strengths are strong analytical thinking, consistency, and the ability to work well in a team. I also handle pressure well and always try to improve myself through feedback.

ThankYou.
